

19

Remove the Tek screws and weld around the edges of the holes in the seat box and floorpan, tunnel and sills. Then fully weld fill the holes. This is what you'll end up with

22

Mount the adaptor to the modified seat box as shown, using the supplied bolts. Seal the access holes with rubber grommets after doing so

20

Adaptors are available to fit Procar seats to most cars. There's a wide range of Procar seats available. Most of those suitable for a car like this cost between \$1200 and \$1400 a pair. The adaptors cost \$100 each

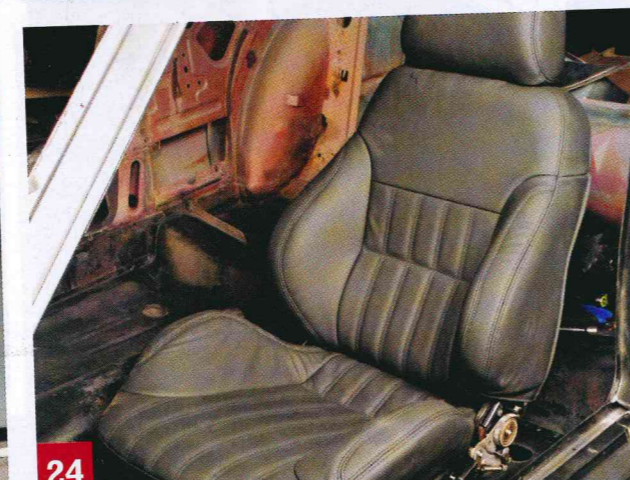

23

Fit the seats onto the adaptors and fix them in place as shown. Use the highest slots on the rails to keep the seats as low as possible. After all, that was the whole point of the exercise!

21

Attaching the rails to the seat couldn't be easier. The bolt holes simply line up and you screw the bolts into place

24

With the seats fitted and checked, they can be removed so that the body can be finished and prepped. The Muscle Car Factory is the local importer of Procar seats so if you'd like a set, give Leo a call on (03) 9580 3548

PRO PERFORMANCE
